

## Research Engineer

Proven ability to design and execute experiments, analyse and present data, develop scientific Python software. Strong background in applied and basic research in THz photonics and magnetotransport in 2D materials.

- Data analysis & presentation
- Experimental design & execution
- Instrumentation integration & orchestration
- Scientific Python development

## Multitel ASBL

*Non-profit innovation center specializing in applied photonics, AI, etc.*

📅 Mons  
Belgium

### Research Engineer in THz Spectroscopy and Imaging

Developed a THz time-domain spectroscopy (THz-TDS) data pipeline with an improved signal-to-noise ratio by utilizing sensitivity profile-shaped filtering.

Developed a computationally cheap THz-TDS data processing method for refractive index and thickness extraction in low-absorption materials.

Streamlined refractive index profile reconstruction from THz-TDS data by offloading calculations to a GPU and utilizing backpropagation-based optimization algorithms.

Automated laboratory workflows by implementing Python tools for measurement orchestration, data management, analysis, and result presentation.

Ensured best software development practices by implementing unit testing, CI/CD pipelines, and documentation.

Aug. 2024

## Laboratoire National de Métrologie et d'Essais

*French National Laboratory of Metrology and Testing (LNE)*

📅 Trappes  
France

### Research Engineer in Quantum Hall Effect Metrology

Led low-noise cryogenic magnetotransport measurements on graphene, exploring its potential as a resistance standard.

Designed a flexible Python software package, optimizing scientific equipment orchestration.

Participated in the nanofabrication of hBN-encapsulated graphene stacks.

Improved performance of a helium gas recuperation system.

## Institute for Physics of Microstructures (IPM RAS)

State-owned research institute specializing in solid state physics.

📅 Nizhny Novgorod  
Russia

### Research Engineer in Photonics of 2D Narrow-Gap Heterostructures

📍 May 2017  
Sep. 2018

Led photoluminescence and photoconductivity FTIR cryogenic measurements of HgTe/HgCdTe quantum wells.

Achieved laser emission in HgCdTe heterostructures at a record wavelength.

## Laboratoire Charles Coulomb (L2C) & IPM RAS

I2S Doctoral School at the University of Montpellier & L2C

📅 Montpellier, France  
Nizhny Novgorod, Russia

### Ph.D. in Solid State Physics

📍 Sep. 2014  
Dec. 2017

Thesis: "Physical properties of HgCdTe-based heterostructures: towards terahertz emission and detection"

Implemented a double-modulation technique, enabling the extraction of critical magnetic fields in a topological insulator.

First to observe a temperature-driven phase transition in a HgTe/CdHgTe topological insulator using magnetotransport.

**Data analysis & presentation:** Python, NumPy, Pandas, Xarray, SciPy, Matplotlib, hvPlot, Plotly, Bokeh, Panel, Intake

**Instrumentation integration & orchestration:** PyMeasure, Bluesky, yag, LabVIEW

**Reporting:** Quarto, Jupyter, Typst, LaTeX

**Programming:** VSCode, Git, Linux, Docker, PyTest, Pre-Commit, GitLab CI/CD, GitHub Actions, TDD, Devcontainers

**Languages:** English (upper-intermediate), French (upper-intermediate), Russian (native)
